Azure backup and recovery

Microsoft Azure provides a reliable cloud computing platform for agile and scalable building, testing and deployment of modern apps. While Microsoft assumes responsibility for the infrastructure, their Shared Responsibility Model makes it clear that it is still your data and you retain the responsibility to secure and protect it.
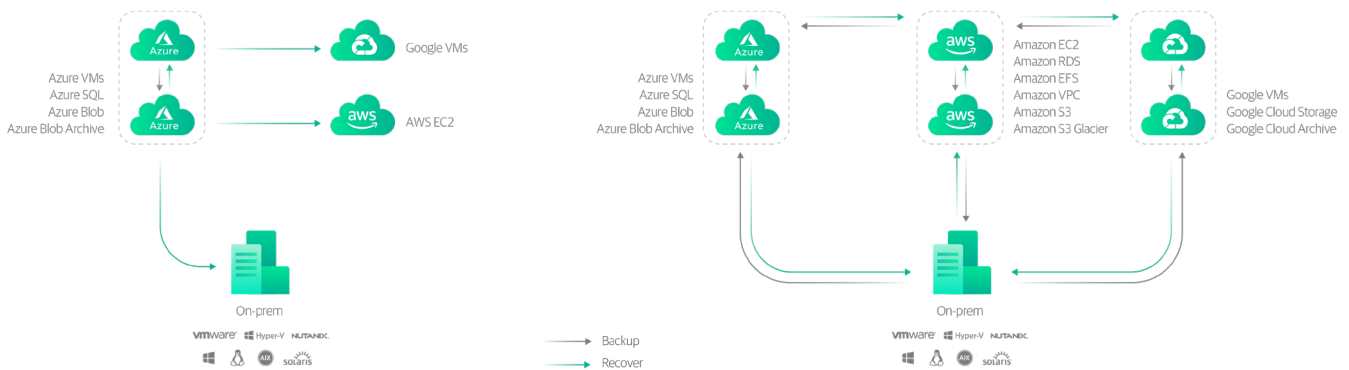

Veeam Backup *for Microsoft Azure* delivers native, fully automated Azure backup and recovery to easily protect and manage all your Azure data. Built with cost-effectiveness, security and scalability in mind, you can eliminate the risk of data loss for all your Azure data while saving big.

Set and forget simplicity

Policy-based automation easily manages the creation, retention and lifecycle of native snapshots, eliminating manual processes, custom scripts and agents

Fast and flexible recovery

Easy wizard-driven recovery options enable near-zero RTOs, from entire instances to individual files and folders, as well as instant recovery out of Azure

Low-cost backup

Cost calculator, intelligent tiering to Azure storage classes and compression deliver the low-cost Azure backup while hitting retention and compliance objectives

Greater security and compliance

Role-based access control, cross-region backup and encryption help to secure your data against ransomware, cyberthreats and bad actors

One platform

One platform centrally manages Azure backup with other cloud, virtual, physical, SaaS and Kubernetes environments under a single, powerful interface

Cloud Mobility

Backup, recover and migrate your files, application items and instances across cloud, virtual and physical environments with no Veeam charges

Veeam-powered Azure backup and recovery is available in two options:

Veeam Backup *for Microsoft Azure*
A standalone solution to back up Azure workloads within Azure only

Veeam Backup & Replication™
#1 backup and recovery for unified hybrid-/ multi-cloud data protection and mobility

Built for Azure

Azure-native

Utilize native snapshots for incredibly low RPOs without the need for agents

Azure SQL Backup

Easily backup and recover Azure SQL Databases with flexible policy-based automation

Simple setup

Deploy directly from the Azure Marketplace to start protecting data in just minutes

Fully automated

Effortlessly protect all data — even at scale — with policy-based automation and labels

Rapid recovery

Quickly overcome any data loss with flexible instance, volume and file-level recovery options

Cost calculation

Avoid cloud overspend while still achieving SLOs with industry-first cost calculation

Low-cost tiering

Automatically tier snapshots to low-cost storage classes for retention and compliance

Cross-subscription/region backup

Isolate backups from production to secure data against internal and external threats

Multi-subscription support

Easily scale and manage the protection of all workloads across your Azure subscriptions

RESTful API

Integrate and automate Azure backup with other workflows and apps

App and data mobility

Unlimited data portability between Azure, on premises and other public clouds

One Platform

Centralize Azure backup under a single platform with your other workloads
